The Purpose of this Toolkit

At many institutions of higher education, the humanities have been languishing, with declining numbers of students choosing humanities majors and declining enrollments by non-majors in history, philosophy, literature and language courses. The impact on a society that devalues a liberal education is a frightening one. It raises a specter of generations of adults who have lost their sense of the past, their civic responsibilities, and any shared vision for the future.

How might this trend be reversed? How can the humanities become once again the center of higher education, revered and valued, the very roots from which all other intellectual explorations arise?

The future health of the humanities lies in general education. These courses should be the foundation of any education, regardless of students’ major or professional aspirations. General education is where students have the opportunity to cultivate the skills and dispositions associated with humanistic inquiry—strong communication and analytical skills along with the intellectual agility to navigate a variety of perspectives—that are essential for democratic participation and effective citizenship.

Purdue University offers a successful model for making the Liberal Arts an integral aspect of a coherent general education program. Over a three-year timespan, its College of Liberal Arts reversed the decline in credit hours and raised morale and teaching opportunities for participating faculty, and heightened the status and visibility of its College through its Cornerstone Integrated Liberal Arts certificate program. By engaging college students with significant texts under the mentorship of Liberal Arts faculty, the program has strengthened their creative thinking and communication skills, challenged them to grapple with big questions, and see their degree program, whether computer science or aviation technology, through a wider lens.

This toolkit shares lessons learned from Purdue’s experience to serve as a guide for adapting the program model at institutions committed to reinvigorating the role of the humanities in general education. The toolkit offers practical strategies for faculty leaders to engage their colleagues, secure administrative and faculty buy-in, attract students, and plan for the longer-term sustainability of their programs. These strategies were developed pre-pandemic, but the toolkit offers ideas for adapting to our new normal for the medium-term, to at least lay the groundwork for the program during a planning phase. As more institutions join the Cornerstone initiative and adapt the model to their settings, this toolkit will be periodically updated to capture lessons from a broader array of participants.
This toolkit is intended to spark constructive conversation on your campus about adapting the Cornerstone program model and to make the difficult work of curricular reform more manageable. Faculty leaders interested in adapting the Cornerstone approach to general education at their campuses should reflect on the guiding questions that follow.

1. How will you engage faculty colleagues to ensure the program has longevity and can be delivered at sufficient scale?

2. How will you build faculty consensus around transformative texts as part of fostering a common intellectual experience for students at the outset of their undergraduate experience? How can such texts reflect variety in terms of authorship, era, geography, and genre?

3. How will you prepare faculty with various areas of specialization to teach in a general education program with students from a range of backgrounds, lived experience, and professional aspirations for their post-college careers?

4. How will your program be structured to reach a significant proportion of your undergraduate student body? Will it involve components that are required for all students or meet general education distribution requirements? Will it be set up with an incentive of some kind (e.g., certificate) to attract students?

5. How will you engage administrators to ensure the program is financially sustainable and supported across the institution?

6. Will your program necessitate approval of new curricular structures (e.g., approval for mandatory first-year seminars)? What considerations must be addressed as a matter of academic governance at your institution (or at the state level for public institutions) for your program to launch?

7. What other constituents should you be thinking about given your campus context to ensure the health of your program (e.g., professional academic advisors at large institutions)? What partnerships could you establish to raise the visibility of your program to students?
Purdue’s Experience with the Cornerstone Approach

The Cornerstone Integrated Liberal Arts at Purdue University (henceforth, Purdue Cornerstone) is designed as a 15-credit hour certificate program. It begins with an enriched first-year experience anchored in transformative texts, followed by a pathway through which students can fulfill two-thirds of their general education requirements as they earn the Cornerstone certificate by completing Liberal Arts classes. The program is designed to fit into every degree program offered at Purdue.

Students who embark on the Purdue Cornerstone certificate take a two-semester sequence in their first year in which they read powerful and influential works of literature and philosophy that have transformed the world and continue to have the power to transform individual lives. These works are wide-ranging in terms of authorship, era, and geographic origin: from the *Epic of Gilgamesh*, Homer, and Plato to Shakespeare, Thomas Jefferson, Edmund Burke, Frederick Douglass, Langston Hughes, Hannah Arendt, Eileen Chang, James Baldwin, and Chinua Achebe, among others. At least half the reading assignments in all sections of this sequence are drawn from a faculty-created list of major texts and authors—with a resulting degree of commonality that helps create a sense of belonging and intellectual community for students. These two courses fulfill three of Purdue’s core requirements: oral communication, written communication, and information literacy.

Through subsequent enrollment in three upper-level courses to complete the certificate, students draw connections between the humanities and social sciences and their professionally oriented academic majors through thematically organized clusters. These courses—under such topics as “Healthcare and Medicine” and “Science and Technology”—complement the STEM, management, and health sciences majors. The topics are designed to appeal to STEM and pre-professional students, who now dominate undergraduate enrollment at many institutions. They are intended to help them appreciate that seemingly technical problems cannot always be addressed exclusively through technical solutions. The courses also provide a purposeful and coherent path for completing their general education requirements.

For example, engineering students can take coursework on the scientific impact of the Italian Renaissance, the philosophy of science, and constitutional law undergirding the regulatory framework for technology in American society. Nursing and pharmacy students can take courses on biomedical ethics, global perspectives on health, and the history of medicine and public health. Majors in business
administration are offered courses on communicating in the global workplace, the history of capitalism, or the sociology of developing nations. See the Purdue Cornerstone Plan of Study (Appendix A) for a complete list of all the courses in each theme.

This program offers undergraduates, particularly STEM majors, the opportunity to hone core communication and analytical skills while gaining a broad-based understanding of the world. It also gives them a purposeful path for fulfilling general education requirements. In this respect, the Purdue Cornerstone curriculum functions as a “core within the core.” The Purdue Cornerstone certificate is noted on students’ transcripts to incentivize them to pursue this path for fulfilling general education requirements.

The Cornerstone approach to reinvigorating the role of the Liberal Arts in general education can be delivered in a variety of formats. The two principal components are:

1. Gateway courses in which first-year students engage transformative texts
2. A purposeful pathway through which students can complete most or all of their general education requirements and link the humanities to their professional aspirations.

There are a variety of ways colleges and universities could structure such a program, including mandatory first-year seminars for incoming students coupled with intensive advising to develop tailored pathways through general education; integrating transformative texts into existing courses that meet distribution requirements; or most ambitiously, using transformative texts and questions as a unifying mechanism to develop a coherent general education program for all students. All of these curricular formats involve engaging students with transformative texts in the first year and have the potential to reach a significant share of the undergraduate student body.

It is equally important to carve out a method by which students can continue to take courses in the humanities beyond first year. Thematic pathways which complement a range of degree programs at your university or college is one method, whereby students can fulfill their general education requirements, hone their communication skills and broaden their perspectives.
CREATING A GATEWAY EXPERIENCE THROUGH TRANSFORMATIVE TEXTS

Gateway courses anchored in transformative texts are key to a successful program that will truly encourage students to appreciate the humanities and social sciences and enroll in additional coursework in the Liberal Arts.

These gateway courses should also be designed to be attractive teaching opportunities for faculty in the humanities and social sciences. At Purdue, Liberal Arts faculty—from the sociologist to the musicologist—teach the texts that they wish to teach, often the very books that inspired them to pursue a life of learning. The readings they choose—whether fiction, poetry, great speeches, novels, philosophical and scientific texts—provide the foundation on which faculty teach basic communication and research skills.

Purdue’s new gateway sequence consist of two 100 level courses:

- **SCLA 101 Transformative Texts, Critical Thinking and Communication I: Antiquity to Modernity** *(emphasizes Written Communication and Information Literacy)*
- **SCLA 102 Transformative Texts, Critical Thinking and Communication II: Modern World** *(emphasizes Oral Communication)*

While both courses stress critical reading skills and oral and written communication, the first half of the sequence places a special emphasis on writing instruction and information literacy, and the second half focuses more on public speaking. Nonetheless, the full year sequence keeps students reading, writing, researching, discussing and presenting throughout.

These classes also emphasize mentorship, giving first-year students across the campus a meaningful experience with a full-time faculty member, someone who could guide them, foster their talents and interests, and continue to be a resource throughout their college career. Cornerstone faculty are also trained to handle students in crisis. The goal is to introduce students to an adult on campus to whom they can turn for any reason.

Purdue’s Transformative Texts sequence places Liberal Arts faculty in classrooms filled with mostly STEM students—students who they might otherwise never teach. These courses act as an onramp to the Liberal Arts in which faculty can attract these students to take their next course or even minor or major in their discipline. Since launching the program in Fall 2017, nearly 6,000 students have taken Transformative Texts and as of Spring 2020, 514 students have signed up to complete the certificate.
Making these courses both intellectually and pedagogically appealing for faculty is not difficult. At Purdue, faculty teaching Transformative Texts often select their readings around a concept, such as Citizenship, Friendship, Solitude, Utopia/Dystopia, the Supernatural, or Gods and Heroes. Faculty point students to the beauty, poignancy, and the wisdom of words and ideas. They challenge them. They make them think about themselves and others. And they do so while reinforcing students’ ability to express themselves, listen to others, and inspire others to listen to them. Transformative Texts seeks to enrich the minds and the lives of Purdue students and instill a love of learning and all its related virtues: empathy, perspective, knowledge, and joy.

Transformative Texts provides first-year students across the campus with a shared intellectual experience. Additionally, it cultivates community among faculty across disciplines, allowing them the opportunity to collaborate outside their departments and to discuss how to strengthen undergraduate teaching.

Purdue faculty take their students to theatrical performances, galleries and museums, hold film fests and fiction writing contests, making art, opera, film and theater part of their experience in Transformative Texts. The creativity of the faculty and the students in Transformative Texts has been extraordinary. Students hold political debates and make Shark-tank product pitches. Students design video games based on Dante’s Inferno; graphic illustrations of Gwendolyn Brooks’ poetry; modernized versions of Antigone; photographic essays on Keats’s “Ode to a Nightingale;” short stories in the style of the Tang dynasty tales; and poetry imitating Edgar Allen Poe. The faculty, unbridled by their discipline, have found new ways to get students reading, speaking, listening, writing and even performing.

Faculty as well as students might be reading the Murasaki Shikibu’s The Tale of Genji, de Tocqueville’s Democracy in America, Virginia Woolf’s To the Lighthouse, or Gabriel García Márquez’s Love in the Time of Cholera for the first time. But this is never a drawback—rather an opportunity for collaborative learning. And it offers the excitement that always accompanies discovering something new and majestic.
Lessons Learned

The sections that follow distill key takeaways for campuses interested in developing programs as part of the Cornerstone initiative. The goal of this program is to provide students with a gateway experience anchored in transformative texts and help students link the humanities to their professional aspirations. Successful implementation and longer-term sustainability will depend on fostering faculty leadership and buy-in; engendering support from senior administrators; creating a common intellectual experience that encourages student identification with the program; and raising the visibility of your program to a range of campus constituents.

CREATING FACULTY BUY-IN

Your program should be faculty developed and driven. Why should your colleagues be interested in joining such a program?

1. **Outreach.** Teaching gateway courses like Transformative Texts allows your faculty the opportunity to reach first-year students from across your campus, particularly those in the STEM disciplines. Your faculty can inspire these students to enroll in their departmental courses or even minor or major in their discipline.

2. **Mission.** Faculty want to be part of the solution, revitalizing the humanities, increasing their visibility, and helping your institution provide all students an enriched first-year experience.

3. **Collegiality.** It brings them out of their departments to discuss teaching and mentoring in an interdisciplinary environment.

The success of your program depends on faculty participation. Incentives such as stipends for preparing to teach your gateway courses help but there are other equally important, if less tangible, benefits. At Purdue, what Liberal Arts faculty enjoy most about the program is the camaraderie and fellowship it fosters, allowing the sociologist and the political scientist, the classicist and the philosopher, an opportunity to meet and talk about books, teaching, and students.

Creating such a program also provides your faculty the opportunity to solve the most pressing problem plaguing the humanities (as well as the social sciences and interdisciplinary programs): declining enrollments. Your faculty have invested their lives in perpetuating liberal learning. They want to be part of the solution but are rarely given the opportunity to do so. This program gives them the ability to bring...
students into their discipline, raise the status and visibility of your college, and work across disciplinary boundaries.

These gateway courses recruit students, which is particularly vital for instructors having trouble attracting students to their courses simply because students do not understand what they are teaching or why it is important. Students who encounter an inspiring teacher at the outset of their college career will continue taking classes with that instructor.

These gateway courses give your faculty the freedom to be dynamic and creative teachers, designing enriching experiences for young adults and putting together various media that bring alive the great ideas of the past and the grand challenges of the present.

Finally, this is also a chance to build bridges, to reach out and collaborate with colleagues across campus, particularly in the STEM disciplines. In short, it brings the campus together with one mission in mind: advancing the education of undergraduates.

LEVERAGING ADMINISTRATIVE BUY-IN

To build a successful program, one that becomes engrained in your college culture, support from your administration is vital. At Purdue, David A. Reingold, Dean of the College of Liberal Arts, initiated the development of an integrated liberal arts program to change the way the College delivered general education requirements and to establish an outreach program to STEM students that would bring them into Liberal Arts classrooms. Before Purdue Cornerstone was created, President Mitchell Daniels spoke publicly encouraging more Purdue students to enroll in history, literature, and philosophy courses.

Clearly, administrators want solutions. Your program is a solution. It has the potential to reverse declining enrollments in the humanities, re-energize your faculty, break down the disciplinary differences, bring disparate parts of your campus together in a shared mission, and above all, enrich your students’ lives, refine their skills, and inspire their minds. Far-sighted administrators who also want the best for their institution and students will understand these lofty but by no means unrealistic goals.

Reaching out to administrators in other parts of your campus is equally important. Purdue Cornerstone was developed in dialogue with deans, faculty and advisors in the colleges of Engineering, Science, Management, and Technology (Purdue Polytechnic Institute), in addition to the College of Liberal Arts. For example, it was a faculty member in Engineering who suggested Purdue Cornerstone build a “community of learning” and hold annual dinners for administrators and faculty across the campus to learn about Cornerstone; it was an administrator in Civil
Engineering who suggested the subtitle of the Transformative Texts courses: “Critical Thinking and Communication.” From the outset, they were brought into the conceptualization of the program and have remained involved. They are invested in the success of the program.

**HOW THE PROGRAM WAS ROLLED OUT AT PURDUE**

In the case of Purdue, following upon the work of a committee of department heads appointed by Dean David A. Reingold, the inaugural director, Melinda Zook, Professor of History, was charged with creating an integrated Liberal Arts program in 2016. That spring and summer, she reached out to administrators and faculty in Engineering, Nursing, Pharmacy, Technology, Science, Management, Health Sciences, and Veterinary Medicine. Sometimes she was given the names of likely STEM allies and sometimes she simply emailed them cold. With few exceptions, most met with her. Her goal was to listen, asking them, what gaps they saw in their students’ foundational knowledge and skills? How could the Liberal Arts better educate their students and help prepare them for their future careers? Across the board, they pointed to the students’ weak communication skills and their lack of knowledge about the wider world.

Professor Zook also showed them early plans for the new program. She had designed the pyramid shape of the program with the three Levels, placing 200, 300 and 400 level Liberal Arts courses in the Themes suggested by Dean Reingold. What impressed her STEM colleagues was the purposeful pathway it gave their students to fulfill their general education requirements.

In the summer, she enlisted the help of seven other Liberal Arts colleagues (Christopher Lukasik, Associate Professor of English; Kim Gallon, Assistant Professor of History; Yvonne Pitts, Associate of History; Jeffrey Turco, Associate Professor of German; Patrick Kain; Associate Professor of Philosophy, Molly Scudder, Assistant Professor of Political Science, and Antonia Syson, Associate Professor of Classics). Dean Reingold offered each a stipend for one year (AY 2016-17) to help design the new gateway sequence.

The Director and this small working group of faculty developed the Transformative Texts sequence that was guided through the curricular process in AY 2016-17. They created the learning outcomes and objectives for the courses in alignment with Purdue’s University Core Curriculum. They agreed on the title and course description; and the initial List of Authors and Texts from which faculty would choose at least 50% of their readings. They also created sample syllabi and spent considerable time discussing the best practices for the teaching of oral and written communication. They were aided by instructors from Purdue’s Center for
Instructional Excellence as well as faculty in the Brian Lamb School of Communication and the Purdue Writing Lab.

The List of Authors and Titles is a living document and revised annually. Naturally, creating such a List has the potential for controversy. Where the working group of faculty lacked expertise, they consulted their colleagues, particularly in Native American, African and Asian literature and philosophy. The List is a collaborative and inclusive project.

Currently, the Cornerstone Steering Committee evaluates new authors nominated by faculty members once a year. The criteria they use to judge is simple: is this an author whose work is truly transformative (“original, unexpected, and innovative,” in the words of Italo Calvino)? Is it inspiring and accessible to incoming first-year students?

The Associate Dean for Undergraduate Education helped guide both the certificate and the Transformative Texts sequence through the curricular process at the College and University level. As a state university, it was also vetted by the Indiana Commission for Higher Education. The program was approved in April 2017.

In addition to securing approval for the certificate, the Transformative Texts courses were submitted for consideration as alternatives to fulfill University Core Curriculum competencies in oral and written communication and information literacy. This component of the approval process enabled broader enrollment and positioned the certificate as a genuine path to complete core requirements.

Even with all of these approvals complete, a next step to enable adoption of the Transformative Texts courses was to work in partnership the colleagues across campus to update their plans of study to include them as options. The Dean worked extensively with other campus academic deans to advance the program. Both the Director and the Senior Associate Dean collaborated with campus colleagues to spur these changes and then to communicate those changes among University staff and campus academic advisors.

RAISING THE PROGRAM’S VISIBILITY ON CAMPUS

At Purdue, communicating the importance of Cornerstone began at the outset. In 2017, the Marketing and Communications team in the Liberal Arts Dean’s Office developed the Cornerstone brand and laid the foundation to promote the program on campus and beyond. This included the development of all Purdue Cornerstone-related flyers, banners, advertising, giveaways, etc. to raise awareness of the program. Subsequent events and collateral materials were designed by the Marketing and Communications team in support of the program. The College of Liberal Arts began to sponsor a series of events aimed at faculty, academic advisors, students and
parents. Behind the scenes, the Dean of the College, the Director, and administrators from the College of Liberal Arts continued to meet with Deans, faculty, administrators, and advisors across the campus, particularly with those colleges yet to embrace the Transformative Text course options.

To assist with managing the logistics of Cornerstone, a full-time academic program manager was hired in 2018. The College’s schedule deputy works with that staff member to build the academic schedule for the growing number of sections offered.

In August 2018 Purdue Cornerstone held the first annual Community of Learning Dinner for representatives of the higher administration as well as Deans of colleges and administrative units such as Admissions, Residential Life, Convocations, Galleries and Libraries, and local large employers (particularly, GE and Subaru). These dinners were about apprising everyone on new program developments and having Cornerstone faculty mingle with individuals from across the campus, extolling the virtues of Transformative Texts and the Liberal Arts more generally.

Reaching out to other units on campus and working with them on either short-term projects or to build long-term partnerships has been vital to Purdue Cornerstone’s success. Among the most enriching relationships for Cornerstone faculty and students have been with Purdue Convocations for the Performing Arts. In 2018, Convocations brought a theatrical production of Mary Shelley’s *Frankenstein* to campus. They provided all Transformative Texts students reading *Frankenstein* free copies of the book as well as discounted tickets to the show. In return, Cornerstone faculty brought their students to see the show and gave a pre-performance lecture. This has been a winning partnership for both Cornerstone and Convocations. In 2019, 900 Transformative Texts students went to a theatrical performance of Homer’s *Odyssey* and another 300 to one based on Orwell’s *1984*.

Other units on campus have worked with Cornerstone on special projects. The Center for Brain-Inspired Computing funded a short-story contest on *Frankenstein* and AI in 2018. C-SPAN Archives works with faculty who want videos of historic speeches for their Transformative Texts sections. Both the Writing Lab and the Presentation Center have helped Cornerstone develop its instructional materials. Film and Video Studies has held evening film fests for Cornerstone students.

Such partnerships are important for any program. Big campuses are often like small cities, with so many different departments, centers, and programs that it is difficult for any student (or faculty member) to take advantage of all the opportunities available. Working with different areas of the campus has significantly benefitted Cornerstone faculty and students. These campus units learned about Cornerstone and Cornerstone faculty learned about them. They attained access to large numbers of undergraduates, and in return, can provide them with unique opportunities (e.g., private gallery showings, free books, funding for contests, etc.). These are winning
relationships that will help build and ensure the health of your program.

FOR ADMINISTRATORS AND FACULTY:

- In November 2017, a conference on “Reviving the Liberal Arts” for faculty and graduate students from Purdue and regional campuses, featuring keynote speakers, workshops taught by Cornerstone faculty, and information on the Cornerstone Integrated Liberal Arts program for everyone in attendance.
- In December 2018, the College of Liberal Arts sponsored a luncheon for every academic advisor across campus. President Daniels addressed the participants and an artist entertained everyone on what advice Shakespeare would give students. The advisors were also given flyers and thumb-drives with information about the program. Similar lunches have been held for the past three years to advance awareness of the Purdue Cornerstone courses.

FOR STUDENTS AND PARENTS:

- Fall pizza parties for students about spring registration
- Digital ads, created by the Marketing and Communications team and run as a campus geofence during the summer new beginner registration program
- An event-specific Snapchat filter was created by the Marketing and Communications team for promotion on campus.
- Flyers provided to Colleges across the campus, Residential Life, and all academic advisors for distribution during summer registration
- Display cases in various halls featuring Cornerstone
- Through Marketing and Communications team articles on Cornerstone were published in the student newspaper, the THiNK Magazine (a publication of the College of Liberal Arts), and the Purdue Alumnus magazine
- Social media promotion (Facebook, Twitter, and Instagram)
- Cornerstone promotional materials for students: stress balls, pens, tech tattoos and t-shirts
- Cornerstone information table at campus fairs
- Cornerstone promotional materials and flyers for recruitment at Indiana High Schools
- Cornerstone video featuring interviews with current students; currently found on our webpage but also on YouTube
- A series of events held around the theatrical production of Frankenstein, including a special pre-performance lecture, a fiction writing contest, and a film fest.
• A brunch with all academic advisors across campus wherein students talked about the program
• Free Cornerstone t-shirts for every student in Transformative Texts
• Cornerstone faculty also began working with “Destination Purdue,” University-level Admissions office weekend visit program for underrepresented minority students who have been admitted to Purdue.

PREPARING FACULTY AND SCALING UP
In the pilot phase, Cornerstone offered six sections of SCLA 101 (Transformative Texts I) in fall 2017 and four sections of SCLA 102 (Transformative Texts II) in spring 2018. By fall 2018, all 33 sections of Transformative Texts filled with 997 students, seeking to fulfill their oral and written communication requirements. In fall 2020, Purdue expects to offer 76 sections of Transformative Texts and enroll over 2200 incoming first-year students.

In the pilot phase, Purdue Cornerstone was not yet on any plans of study throughout the university and had to assure academic advisors that the courses were accepted on the University Core Curriculum and their students would receive credit for Written Communication or Oral Communication.

In AY 2017-18, the Director recruited and prepared more Liberal Arts faculty to teach Transformative Texts and this process has continued ever since. As the program grew in visibility, faculty themselves asked to join. So as not to burden the faculty, they were allowed to pick when and how many sections they would to teach per semester working in conjunction with their academic unit.

In 2018, Purdue Cornerstone hired three Visiting Assistant Professors from a nearby Liberal Arts college that had closed. That institution had a core similar to Transformative Texts. Those three instructors each began teaching four sections of
Transformative Texts per semester. In 2020, their visiting faculty lines were converted to teaching professor positions.

In 2019, Dean Reingold mandated that virtually all new tenure track faculty hires in the College of Liberal Arts would fulfill 50% of their teaching obligations in Purdue Cornerstone. The opportunity to teach in Cornerstone became part of Purdue’s attraction in faculty recruitment.

Faculty joining Cornerstone are given a stipend for one semester. During that fellowship semester, they attend meetings and workshops to help prepare them to teach Transformative Texts.

Three meetings are designed for the new cohort of faculty joining the program:

**Meeting 1: Introduction.** Led by the Director, this meeting focuses on the program as a whole (origins, goals, and current developments); then more generally about what to expect when teaching incoming STEM students, the resources available to faculty, how to choose readings. Much of the time is spent discussing best teaching practices.

**Meeting 2: SCLA 101.** Led by a Purdue Cornerstone faculty member who teaches SCLA 101, this meeting focuses on the first half of Transformative Texts. Their syllabus is distributed, and they discuss how they designed it, the readings they chose, and the assignments they use to meet the learning outcomes.

**Meeting 3: SCLA 102.** This meeting serves the same purpose as the second meeting, only it is led by a Purdue Cornerstone faculty member who teaches SCLA 102, the second half of Transformative Texts.

In addition, three workshops for all Purdue Cornerstone faculty who wish to participate are held every semester. The “How I Teach This Text” workshops are led by a Purdue Cornerstone faculty member who wishes to discuss their experiences teaching a particular text, such as Thoreau’s Walden or the Narrative of the Life of Frederick Douglass, an American Slave.

All these workshops and meetings emphasize community and fellowship, seeking to break down the barriers between the disciplines around a common goal: good teaching practices. Breakfast or lunch is served.
With more faculty joining the program, Purdue was able to continue to offer more sections of Transformative Texts.

Adapting to the COVID-19 World

In spring 2020, Purdue’s 59 sections of Transformative Texts transitioned to online and Cornerstone faculty meetings became virtual. The lessons learned from that experience were profound and mostly positive as both students and faculty rose to the occasion.

Faculty sought to retain the vitality of the in-class experience in their online versions of Transformative Texts, experimenting with a wide array of online platforms and other tools: Zoom, Hotseat, Discord, OneDrive, and Camtasia among others. Delivering content was not an issue. But maintaining lively discussion and simply connecting and mentoring students in some human way was a source of concern. Many faculty scheduled synchronous meetings with students and phone calls on Facetime.

Over time, faculty became increasingly inventive in their efforts to keep the dynamism of the Transformative Texts alive. One termed his thrice-weekly lessons “Wilbur Radio” after his cat, whose antics were already known to the students. Starting their day with “Wilbur Radio” (a mix of lecture, close reading and analysis, and cat pictures) was so agreeable to students that even parents became fans.

Another professor seeking new ways of reaching the students in lieu of face-to-face interaction filmed her lecture on John Keats’ “Ode to a Nightingale” to emphasize the importance of nature to the Romantics. This was met by students creating and sharing their own videos and photos of their favorite corners of nature that reminded them of what Keats was trying to express.

Another instructor, conceding to the simple fact that what was most on the minds of the students was the virus, had them each produce a shareable work on the medium of their choice with the broad theme of coronavirus. Students created short films, infographics, public service announcements, comics, trailers, and animated works.

Purdue Cornerstone also held an essay contest for all students enrolled in Transformative Texts. The “My Quarantine Story” contest asked them to write about their experiences since the shut down by relating them to a character or scene in one of their readings. Monetary prizes (Amazon gift cards) were provided for the first and second place winners along with three honorable mentions. Seventy students submitted work. The range of literature they cited was vast: Cormac McCarthy, Michel de Montaigne, Mary Shelley, Franz Kafka, Edgar Allen Poe, Robert Frost, Margaret Atwood, and M. T. Anderson, among others. From their readings, they found the words and images that helped them think about what was happening to them and their world. Odysseus’s long trek back to Ithaca in Homer’s Odyssey became a touchstone for many, feeling as they did, stranded on Calypso’s island. The
results of the contest, shown in the clarity of the students’ writing and their creativity, reinforced the success of the program. But it also pointed to a need to provide the students with more outlets for their thoughts, their artistry (especially through digital mediums) and inventiveness. To that end, Purdue Cornerstone launched an online student journal, *The Cornerstone Review*, in order to publish the best of the student work, particularly from this past spring.

To help instructors teaching Transformative Texts either partially or wholly online, the Director organized two summer working groups of Cornerstone faculty:

The first working group collaborated with the Center for Instructional Excellence to create model online versions of SCLA 101 and 102. Their goal was to investigate the best new technologies for online instruction, seeking to maintain the dynamism of Transformative Texts in a virtual world. The end result was sample online syllabi and a guide on best practices.

The second working group collaborated with the faculty of Purdue Libraries. Their goal was to design short videos on informative literacy that can be uploaded to a faculty member’s Brightspace or any learning management system (LMS). These videos will not replace lessons on research skills but amplify them. The four videos in production are:

1. A virtual tour of the Humanities and Social Science Library
2. Introduction to research: selecting a topic; background research; selecting a database; searching techniques
3. Evaluating Sources: questions to ask oneself
4. Citing Sources: Main elements of documentation and why they are important; links to different styles; how to use embedded database citation tools

Finally, it is important to acknowledge that much of the goodwill that Purdue Cornerstone generated around campus was centered on face-to-face meetings, including meals or coffee. Breaking bread together inspired fellowship. Until there is a vaccine for COVID-19, such gatherings are unlikely. But business at Purdue has carried on as it has at all colleges and universities across the nation. Zoom, WebEx, FaceTime and conference calls still connect the disparate parts of your campus and make it possible to begin the process of setting up such a program.
Appendices

A: Plan of Study for Purdue’s Cornerstone Integrated Liberal Arts Certificate

B: Sample Syllabi

Sample 1
Sample 2

C: Sample Assessment Rubrics

Sample Presentation Rubric
Sample Research Paper Rubric

D. In the Press
